IN RE: Petitioner:
Beneficiary:

PETITION: Petition for a Nonimmigrant Worker Pursuant to Section 101(a)(15)(H)(i)(b) of the
Immigration and Nationality Act, 8 U.S.C. § 1101(a)(15)(H)(i)(b)

ON BEHALF OF PETITIONER:

INSTRUCTIONS:

This is the decision of the Administrative Appeals Office in your case. All documents have been returned to the office that originally decided your case. Any further inquiry must be made to that office.

Robert P. Wiemann, Director
Administrative Appeals Office

DISCUSSION: The director of the service center denied the nonimmigrant visa petition and the matter is now before the Administrative Appeals Office (AAO) on appeal. The appeal will be dismissed. The petition will be denied.

The petitioner sells and services air conditioning and heating units. It seeks to employ the beneficiary as a mechanical engineer. The petitioner, therefore, endeavors to classify the beneficiary as a nonimmigrant worker in a specialty occupation pursuant to section 101(a)(15)(H)(i)(b) of the Immigration and Nationality Act (the Act), 8 U.S.C. § 1101(a)(15)(H)(i)(b).

The director denied the petition because the proffered position is not a specialty occupation. On appeal, counsel submits a brief and additional evidence.

Section 214(i)(1) of the Act, 8 U.S.C. § 1184(i)(1), defines the term "specialty occupation" as an occupation that requires:

- (A) theoretical and practical application of a body of highly specialized knowledge, and
- (B) attainment of a bachelor's or higher degree in the specific specialty (or its equivalent) as a minimum for entry into the occupation in the United States.

Pursuant to 8 C.F.R. § 214.2(h)(4)(iii)(A), to qualify as a specialty occupation, the position must meet one of the following criteria:

- (1) A baccalaureate or higher degree or its equivalent is normally the minimum requirement for entry into the particular position;
- (2) The degree requirement is common to the industry in parallel positions among similar organizations or, in the alternative, an employer may show that its particular position is so complex or unique that it can be performed only by an individual with a degree;
- (3) The employer normally requires a degree or its equivalent for the position; or
- (4) The nature of the specific duties is so specialized and complex that knowledge required to perform the duties is usually associated with the attainment of a baccalaureate or higher degree.

Citizenship and Immigration Services (CIS) interprets the term "degree" in the criteria at 8 C.F.R. § 214.2(h)(4)(iii)(A) to mean not just any baccalaureate or higher degree, but one in a specific specialty that is directly related to the proffered position.

The record of proceeding before the AAO contains: (1) Form I-129 and supporting documentation; (2) the director's request for additional evidence; (3) the petitioner's response to the director's request; (4) the

director's denial letter; and (5) Form I-290B and supporting documentation. The AAO reviewed the record in its entirety before issuing its decision.

The petitioner is seeking the beneficiary's services as a mechanical engineer. Evidence of the beneficiary's duties includes: the Form I-129; the attachments accompanying the Form I-129; the company support letter; and the petitioner's response to the director's request for evidence. According to this evidence, the beneficiary would perform duties that entail planning and designing mechanical and electromechanical systems; and directing and coordinating activities in the operation, application, installation, and repair of heating transfer, air conditioning, and refrigeration systems. The petitioner stated that a candidate for the proffered position must possess a bachelor's degree in mechanical engineering.

The director determined that the proffered position was not a specialty occupation. According to the director, the Department of Labor's (DOL) *Occupational Outlook Handbook* (the *Handbook*) reveals that the proffered position's duties are encompassed in the field of heating, air conditioning, and refrigeration repair, which has an educational requirement of six months to two years in a technical or trade school or community college.

On appeal, counsel states that the proffered position is a specialty occupation. Counsel contends that the *Dictionary of Occupational Titles* (DOT) reveals that the proffered position's duties are performed by a mechanical engineer; as such, they require a bachelor's degree in mechanical engineering.

Upon review of the record, the petitioner has established none of the four criteria outlined in 8 C.F.R. § 214.2(h)(4)(iii)(A). Therefore, the proffered position is not a specialty occupation.

The AAO first considers the criteria at 8 C.F.R. §§ 214.2(h)(4)(iii)(A)(1) and (2): a baccalaureate or higher degree or its equivalent is the normal minimum requirement for entry into the particular position; a degree requirement is common to the industry in parallel positions among similar organizations; or a particular position is so complex or unique that it can be performed only by an individual with a degree. Factors often considered by CIS when determining these criteria include: whether the *Handbook* reports that the industry requires a degree; whether the industry's professional association has made a degree a minimum entry requirement; and whether letters or affidavits from firms or individuals in the industry attest that such firms "routinely employ and recruit only degreed individuals." See *Shanti, Inc. v. Reno*, 36 F. Supp. 2d 1151, 1165 (D.Min. 1999)(quoting *Hird/Blaker Corp. v. Slattery*, 764 F. Supp. 872, 1102 (S.D.N.Y. 1991)).

In determining whether a position qualifies as a specialty occupation, CIS looks beyond the title of the position and determines, from a review of the duties of the position and any supporting evidence, whether the position actually requires the theoretical and practical application of a body of highly specialized knowledge, and the attainment of a baccalaureate degree in a specific specialty as the minimum for entry into the occupation as required by the Act.

Counsel asserts that the proffered position is a specialty occupation because of information in the DOT. However, the DOT is not a persuasive source of information regarding whether a particular job requires the attainment of a baccalaureate or higher degree in a specific specialty, or its equivalent, as a minimum for

entry into the occupation. The DOL has replaced the *DOT* with the *Occupational Information Network (O*Net)*. Both the *DOT* and *O*Net* provide only general information regarding the tasks and work activities associated with a particular occupation, as well as the education, training, and experience required to perform the duties of that occupation. The *Handbook* provides a more comprehensive description of the nature of a particular occupation and the education, training, and experience normally required to enter into and advance within the occupation. For this reason, CIS is not persuaded by a claim that the proffered position is a specialty occupation simply because of information in the *DOT*.

The company brochures that are contained in the record show that the petitioner is an authorized dealer of air conditioning and heating manufacturers, and that it provides installation, maintenance, and servicing of the units. Based on the evidentiary record and a review of the *Handbook*, the director correctly determined that the duties of the proffered position are performed by heating and air-conditioning mechanics and installers - also called technicians. The *Handbook* states that heating and air-conditioning mechanics install, service, and repair heating and air-conditioning systems. It also indicates that employers hire those with technical school or apprenticeship training, that many mechanics and installers still learn the trade informally on the job, and that many secondary and postsecondary technical and trade schools, and junior and community colleges offer 6-month to 2-year programs. Accordingly, the petitioner cannot establish that a baccalaureate or higher degree or its equivalent in a specific specialty is the normal minimum requirement for entry into the particular position, mechanical engineer.

There is no evidence in the record that would establish the second criterion - that a specific degree requirement is common to the industry in parallel positions among similar organizations or that the proffered position is so complex or unique that it can be performed only by an individual with a degree. Again, the *Handbook* reveals that the proffered positions' duties are performed by heating and air-conditioning mechanics, occupations that do not require a bachelor's degree.

No evidence in the record establishes the third criterion at 8 C.F.R. § 214.2(h)(4)(iii)(A): that the petitioner normally requires a degree or its equivalent for the position.

Finally, because the *Handbook* reveals that the proffered positions' duties are performed by heating and air-conditioning mechanics, which are occupations that do not require a bachelor's degree, the petitioner cannot establish the regulation at 8 C.F.R. § 214.2(h)(4)(iii)(A)(4) which requires that a petitioner establish that the nature of the specific duties is so specialized and complex that the knowledge required to perform the duties is usually associated with the attainment of a baccalaureate or higher degree.

As related in the discussion above, the petitioner has failed to establish that the proffered position is a specialty occupation. Accordingly, the AAO shall not disturb the director's denial of the petition.

The burden of proof in these proceedings rests solely with the petitioner. Section 291 of the Act, 8 U.S.C. § 1361. The petitioner has not sustained that burden.

ORDER: The appeal is dismissed. The petition is denied.
