IN RE: Petitioner:
Beneficiary:

PETITION: Petition for a Nonimmigrant Worker Pursuant to Section 101(a)(15)(L) of the Immigration and Nationality Act, 8 U.S.C. § 1101(a)(15)(L)

ON BEHALF OF PETITIONER:

INSTRUCTIONS:

This is the decision of the Administrative Appeals Office in your case. All documents have been returned to the office that originally decided your case. Any further inquiry must be made to that office.

Robert P. Wiemann, Director
Administrative Appeals Office

DISCUSSION: The nonimmigrant visa petition was denied by the Director, Vermont Service Center. The matter is now before the Administrative Appeals Office (AAO) on appeal. The AAO will dismiss the appeal.

The petitioner states that it is a computer software development firm. It seeks to employ the beneficiary temporarily in the United States as a programmer analyst. The director denied the petition concluding that the beneficiary is not employed in a position that involves specialized knowledge. The director stated that the petitioner had failed to demonstrate that the procedures used by the beneficiary are significantly different from the methods generally used in other computer software development firms, or that the beneficiary's understanding of the petitioning organization's products, processes and procedures constitutes specialized knowledge. The director also stated that the petitioner had not established that the position being offered to the beneficiary requires the services of an individual possessing specialized knowledge. The petitioner subsequently filed an appeal.

On appeal, counsel for the petitioner asserts that the director improperly applied the relevant statute to the evidence previously submitted in support of the beneficiary's specialized knowledge capacity.

To establish L-1 eligibility, the petitioner must meet the criteria outlined in section 101(a)(15)(L) of the Immigration and Nationality Act (the Act), 8 U.S.C. § 1101(a)(15)(L). Specifically, within three years preceding the beneficiary's application for admission into the United States, a qualifying organization must have employed the beneficiary in a qualifying managerial or executive capacity, or in a specialized knowledge capacity, for one continuous year. In addition, the beneficiary must seek to enter the United States temporarily to continue rendering his or her services to the same employer or a subsidiary or affiliate thereof in a managerial, executive, or specialized knowledge capacity.

The regulation at 8 C.F.R. § 214.2(l)(3) further states that an individual petition filed on Form I-129 shall be accompanied by:

- (i) Evidence that the petitioner and the organization which employed or will employ the alien are qualifying organizations as defined in paragraph (l)(1)(ii)(G) of this section.
- (ii) Evidence that the alien will be employed in an executive, managerial, or specialized knowledge capacity, including a detailed description of the services to be performed.
- (iii) Evidence that the alien has at least one continuous year of full time employment abroad with a qualifying organization within the three years preceding the filing of the petition.
- (iv) Evidence that the alien's prior year of employment abroad was in a position that was managerial, executive or involved specialized knowledge and that the alien's prior education, training, and employment qualifies him/her to perform the intended services in the United States; however, the work in the United States need not be the same work which the alien performed abroad.

According to the evidence submitted, the petitioner is a subsidiary of Hexaware Technologies Ltd., located in India. The petitioner was incorporated in 1993 and states that it is a computer software development firm.

The petitioner claims 170 plus employees and \$32,000,000 in gross annual income. The petitioner seeks to employ the beneficiary as a programmer analyst for a period of three years, at a yearly salary of \$55,000.00.

The issue in this proceeding is whether the petitioner has established that the beneficiary possesses specialized knowledge, and will be employed in a specialized knowledge capacity.

Section 214(c)(2)(B) of the Act, 8 U.S.C. § 1184(c)(2)(B), provides the following:

For purposes of section 101(a)(15)(L), an alien is considered to be serving in a capacity involving specialized knowledge with respect to a company if the alien has a special knowledge of the company product and its application in international markets or has an advanced level of knowledge of processes and procedures of the company.

The regulation at 8 C.F.R. § 214.2(l)(1)(ii)(D) defines “specialized knowledge” as:

[S]pecial knowledge possessed by an individual of the petitioning organization’s product, service, research, equipment, techniques, management, or other interests and its application in international markets, or an advanced level of knowledge or expertise in the organization’s processes and procedures.

In a letter, dated May 10, 2002, the petitioner stated that the beneficiary has been employed by the foreign entity since August 31, 2000 in a capacity of Senior Software Engineer. The petitioner further stated that the beneficiary’s area of expertise includes Mainframe Applications such as DB2, CICS, JCL, VSAM, and COBOL. The petitioner asserted that the beneficiary had been actively involved in design, development, and testing of various applications on Mainframe Platforms and fine tuning SQL statements on various platforms. The petitioner further stated that the beneficiary has been exposed to creating databases, tables, assigning permissions, and changing database properties. The petitioner asserted that the beneficiary was actively involved in designing and developing tools for the applications and was also active during the implementation of the Bank of America project. In addition, the petitioner stated that the beneficiary possessed a working knowledge of JAVA, VB, and MS ACCESS applications.

In a support letter, dated May 24, 2002, the beneficiary’s proposed job duties are described as follows:

[The beneficiary] will fill the position of Programmer Analyst in the Application Management Group at our Princeton, New Jersey office. This position requires specialized knowledge of [the U.S. entity’s] proprietary product line and, in particular, specialized knowledge of the “Connector” technology. This position requires that [the beneficiary]: (1) design, develop, and provide customized implementation for clients’ systems utilizing the “Connector” technology; (2) obtain clients’ sign off; (3) system testing; and (4) to provide user training to the clients.

In that same letter, the petitioner stated the reason for the transfer of the beneficiary to the United States as follows:

[The petitioner] maintains a regular rotational program for key personnel with unique and proprietary knowledge of the company’s internal procedures, methods, and product lines. This rotation assures that all key personnel are in touch with the most current techniques and

procedures of all of the various aspects of [the U.S. entity's] procedures and services and ensures that some level of uniformity is achieved throughout the various offices.

The petitioner described the beneficiary's experience working for the foreign entity as follows:

[The beneficiary] has been employed by the [foreign entity] in India since August 31, 2000 [sic] to date. During this period, he has been working in the capacity of a Senior Software Engineer. His areas of expertise include Mainframe Application [sic]. He has extensive knowledge in the Mainframe Applications [field] like [sic] DB2, CICS, JCL, VSAM and COBOL. He has been actively involved in design, development and testing of various applications on Mainframe platforms, [and] fine tuning SQL statements on various platforms. He also has good exposure on [sic] creating databases, tables, assign permissions, and change [sic] database properties. [The beneficiary] was actively involved in designing and developing tools for the applications. Further, he was an active member during the implementation of [the] Bank of America project. He has good knowledge of JAVA, VB and MS ACCESS applications.

The petitioner further stated in the letter of support that the beneficiary was awarded a Bachelor's degree in Engineering from the Karnatak University in 1992.

The petitioner submitted a copy or an academic evaluation prepared by the Trustforte Corporation dated May 23, 2002; an employment confirmation letter from the foreign entity, identifying the beneficiary's employment from August 31, 2000 to the present; and a Bachelor's degree in Engineering and transcripts from the Karnatak University. The petitioner also submitted copies of a passing certificate and character certificate from the Engineering College in Belguam and the beneficiary's pay slips issued by the foreign entity.

In a request for evidence, the director noted that the record did not sufficiently establish that the beneficiary had truly specialized knowledge or that he had been and will be employed in a truly specialized knowledge capacity. The director requested that the petitioner submit evidence establishing that: (1) the beneficiary's knowledge is uncommon, noteworthy, or distinguished by some unusual quality and is not generally known by practitioners in the beneficiary's field of endeavor; (2) the beneficiary's advanced level of knowledge of the processes and procedures of the company distinguish him from those with only elementary or basic knowledge; (3) the knowledge possessed by the beneficiary is not general knowledge held commonly throughout the industry but that it is truly special or advanced; (4) the beneficiary possesses knowledge that is valuable to the employer's competitiveness in the marketplace; (5) the beneficiary is qualified to contribute to the United States employer's knowledge of foreign operating conditions as a result of special knowledge not generally found in the industry; (6) the beneficiary has been utilized abroad in a capacity involving significant assignments which have enhanced the employer's productivity, competitiveness, image, or financial position, that he possesses knowledge, which normally can be gained only through prior experience with that particular employer; and (7) the beneficiary possesses knowledge of a product or process that cannot be easily transferred or taught to another individual. The director further stated that the evidence must substantiate that the beneficiary possesses knowledge of the firm's business procedures or methods of operation to the extent that the U.S. entity would experience a significant interruption of business in order to train a U.S. worker to assume the duties proposed for the beneficiary in the United States.

In response, counsel for the petitioner submitted a statement asserting that the beneficiary has an advanced level of knowledge of the petitioning company's processes and procedures relating to software interfaces. Counsel reiterated a description of the beneficiary's work experience and job duties. Counsel further stated that the beneficiary had gained in-depth knowledge and expertise in the company's interface products through his employment with the foreign entity. Counsel contends that the foreign entity has invested a large sum of money in setting up training and production facilities dedicated to the development of its interface products. Counsel also contends that all the company's technical consultants (including the beneficiary) who possess knowledge of the interface products were trained and employed by the foreign entity. Counsel asserted that the beneficiary possesses specialized knowledge and is distinct among others in the computer field based upon his combination of skill sets and knowledge of the organization's interface or connector technology products. Further, counsel asserted that the beneficiary's knowledge is different from that which is ordinarily encountered in the field. Counsel also stated that the beneficiary has also gained specialized knowledge of the foreign entity's PeopleSoft Adapter (HPA), which interfaces any Enterprise Resource Planning (ERP) or homegrown application to PeopleSoft Human Resource Management System (HRMS), General Ledger (GL), and Payroll applications. Counsel stated that this product is proprietary to the company. Counsel claimed that the beneficiary's knowledge and experience gained while working for the foreign entity is not readily available in the United States, and that the expertise he possesses is sophisticated state of the art technology in a niche market.

Counsel continued by asserting that only a small percentage of the organization's technical consultants both in India and the United States possess specialized knowledge of the company's Connector technology and PeopleSoft Adapter products. Counsel further stated that 13 percent of the consultants (including the beneficiary) in India and 8 percent of the consultants in the United States possess specialized knowledge in this respect. Counsel concludes by contending that many of the ongoing projects have reached a point where the physical presence of technical consultants (including the beneficiary) who possess specialized knowledge of the entity's Connector interface technology and PeopleSoft Adapter is required on site in the United States.

In his decision, the director concluded that the record did not establish that the beneficiary has been or would be employed in a specialized knowledge capacity, as required for classification as an L-1B intracompany transferee. Upon reviewing the detailed description of the beneficiary's job responsibilities, the director determined that the job duties were not significantly different from those of other programmer analyst in a computer software development firm, and does not "warrant the expertise of someone possessing a truly specialized knowledge." The director further stated that the petitioner had failed to demonstrate that the foreign entity's interface or connector technology was significantly different from the technology generally used in other software development companies. The director also stated that the petitioner had failed to demonstrate how an understanding of the company's technology constitutes "specialized knowledge." The director stated that while the petitioner states that it is the only company, other than the vendors of middleware or hub products, that possess the expertise in the 'connector' or interface products; the statement suggests that all companies that sell the middleware or hub products are also well versed in 'connector' or interface products. The director concluded that therefore, an in-depth knowledge of "connector" and interface products does not appear to be unusual for an individual employed as a technical consultant in the industry.

The director also noted that the petitioner's explanation of the beneficiary's duties seemed to merely paraphrase the definition of "specialized knowledge." The director concluded that the petitioner had failed to document how the beneficiary's knowledge of the processes and procedures, namely familiarity with the "connector" or interface technology of the petitioning organization are advanced or substantially different from the knowledge possessed by other individuals similarly employed. The director also concluded that the

petitioner had failed to sufficiently demonstrate that the knowledge the beneficiary possesses would be difficult to impart to another individual without significant economic inconvenience to the U.S. or foreign entities or that the knowledge is not generally known and is of some complexity. Consequently, the director denied the petition.

On appeal, counsel for the petitioner submits a brief in which he asserts that the director reached an erroneous conclusion based upon an improper reading of the relevant section of the Act. Counsel also contends that the director reached an erroneous conclusion in that he mistakenly concludes that the beneficiary does not qualify for L-1B status in a specialized knowledge capacity because of the lack of evidence to establish that the beneficiary's knowledge of the processes and procedure of the U.S. and foreign entities are substantially different from, or advanced in relation to, any individual similarly employed. Counsel further reiterates a description of the beneficiary's knowledge, training, and expertise in the computer software development field. Counsel asserts that the beneficiary received his specialty training regarding Constellar Interfaces and PeopleSoft Adapter products from the foreign entity and that within the company only a handful of consultants possess this specialized knowledge. Counsel further asserts that the beneficiary's combined knowledge of the company's proprietary products, such as Constellar Interfaces and PeopleSoft HPA, qualifies as "specialized knowledge." Counsel concludes by stating that contrary to the director's determination, a typical programmer analyst in the company or in the IT industry would not be able to perform the beneficiary's job duties as they do not possess the combined knowledge of the "Constellar Interface" and PeopleSoft HPA products that he possesses.

On review of the record, the petitioner has not established that the beneficiary possesses specialized knowledge or that he will be employed in a specialized knowledge capacity as required in 8 C.F.R. § 214.2(l)(3)(ii). Counsel contends that the beneficiary possesses specialized knowledge of the organizations products, processes, and procedures. Counsel asserts that the beneficiary acquired the specialized knowledge through the training programs offered to the beneficiary by the foreign entity at its training and production facilities in India. Contrary to counsel's contentions, there is no evidence of record to demonstrate that the beneficiary received the claimed training. The petitioner has not presented any evidence to substantiate the claim that the courses offered by the foreign entity adequately equip the beneficiary with specialized knowledge not common to other programmer analysts in the industry. There has been no evidence submitted such as degrees, certification, course transcripts, or certificates of completion to establish that the beneficiary received specialty training regarding Constellar Interfaces and PeopleSoft Adapter products from the foreign entity. Going on record without supporting documentary evidence is not sufficient for purposes of meeting the burden of proof in these proceedings. *Matter of Treasure Craft of California*, 14 I&N Dec. 190 (Reg. Comm. 1972).

Furthermore, contrary to counsel's assertions, mere familiarity with an organization's product, process or service, such as knowledge of its "Connector" technology, "Constellar Interface," and PeopleSoft Adapter applications does not constitute special knowledge under section 214(c)(2)(B) of the Act. While the petitioner claims that the beneficiary's experience with the organization includes intimate familiarity with the foreign entity's offshore operations and proprietary products, including "connector technology," and intimate familiarity with client's software development projects gained while working on the projects during the offshore phase, this statement alone is not indicative of specialized knowledge capacity. In addition, although the petitioner contends that the beneficiary will be integral as an onsite staff member, and will continue to utilize the offshore project artifacts, tools and methodologies for providing the remaining project tasks, this claim is insufficient to establish that the beneficiary possesses specialized knowledge or will be performing tasks that require specialized knowledge. The record does not demonstrate that the tasks

described are not common to all programmer analysts in the computer software application and development field. The described duties do not require advanced expertise or establish that the beneficiary possesses a special knowledge of the organizations functions and software application systems. Further, the petitioner states that the onsite tasks will consist of business requirement analysis, technical architecture requirements analysis, high-level design, and post delivery implementation and support services. There has been no evidence submitted to establish that the tasks are so intricate that they require the services of one who possesses specialized knowledge in the field. Simply going on record without supporting documentary evidence is not sufficient for purposes of meeting the burden of proof in these proceedings. *Matter of Treasure Craft of California, supra*. It appears that the description given is common to all computer firms in the software development business and does not differentiate the beneficiary from that of any other person employed as a programmer analyst. In addition, by the petitioner's own admission, it can be reasonably concluded that other vendors of middleware or hub products also possess expertise in the "connector" or interface technology and products. Cf. U.S. Department of Labor, Bureau of Labor Statistics, *Occupational Outlook Handbook*, 2004-05 edition, "Computer Programmer, Systems Analysts, Database Administrators, and Computer Scientists" (online at <http://www.bls.gov/oco/ocos110.htm> and [ocos042.htm](http://www.bls.gov/oco/ocos042.htm)).

In the instant case the petitioner has demonstrated that the beneficiary is skilled and familiar with connector technology techniques and applications that are undoubtedly beneficial to the organizations offshore and onshore processes. However, the plain meaning of the term "special" knowledge is knowledge or expertise beyond the ordinary in a particular field, process, or function. See section 214(c)(2)(B) of the Act. The petitioner has not furnished evidence sufficient to demonstrate that the beneficiary's duties involve knowledge or expertise beyond what is commonly held in his field. In addition, the petitioner notes that a training division has been built in India to accommodate training personnel to effectively assist clients, and that it maintains a regular rotational program to assure that all key personnel are in touch with the most current techniques and procedures of all of the various aspects of the organizations procedures and services. The petitioner also stated that 13 percent of the consultants in India and 8 percent of the consultants in the United States possess specialized knowledge acquired through training and experience at the foreign entity. However, the evidence does not establish the total number of consultants employed by the organization in relation to the percentage of employees trained, nor does the record reflect who among the employees and consultants are considered "key personnel."

In addition, the record does not establish that the beneficiary has advanced or special knowledge of the petitioning organization's product, procedures, or its application in U.S. and international markets. Counsel contends that the beneficiary's combined knowledge of the organization's proprietary products, namely "Constellar Interfaces" and PeopleSoft HPA, is significant and qualifies as "specialized knowledge." Contrary to counsel's contention, a mere knowledge of an organization's proprietary products does not connote "special" knowledge where the individual is one of many employees privy to such information. Furthermore, any experienced programmer analyst would necessarily possess knowledge of its company's proprietary products in order to function efficiently in the field. The beneficiary's employment experience with the foreign organization may have given him knowledge that is useful in performing his duties as a programmer analyst, but it cannot be the case that any useful skill is to be considered to constitute special or advanced knowledge. One's knowledge of "Connector" technologies and PeopleSoft Adapters is not, of itself, "specialized knowledge." Contrary to counsel's assertions, the beneficiary's knowledge of the company product or of the processes and procedures of the foreign company, has not been shown to be substantially different from, or advanced in relation to, that of any programmer analyst of any software development firm. Simply going on record without supporting documentary evidence is not sufficient for purposes of meeting the burden of proof in these proceedings. *Matter of Treasure Craft of California, supra*. Without supporting documentation, the

assertions of counsel do not constitute evidence. *Matter of Obaigbena*, 19 I&N Dec. 533, 534 (BIA 1988); *Matter of Ramirez-Sanchez*, 17 I&N Dec. 503, 506 (BIA 1980).

In accordance with the statutory definition of specialized knowledge, a beneficiary must possess "special" knowledge of the petitioner's product and its application in international markets, or an "advanced level" of knowledge of the petitioner's processes and procedures. See section 214(c)(2)(B) of the Act. Here, the evidence demonstrates that the beneficiary possesses the skill required to work as a programmer analyst dealing with various software interface applications, not a special knowledge of the petitioner's processes and procedures. Furthermore, although the petitioner's approach to software engineering processes may be unique or specialized, the beneficiary's application of that process will not necessarily qualify as advanced. In addition, the computer software application training appears to be readily available within the organization. There has been no independent documentary evidence submitted to establish that any computer technician within the United States cannot be trained to perform tasks performed by the beneficiary within a reasonable period of time so as not to negatively effect the overall operations of the U.S. and foreign entities.

Furthermore, the petitioner's description of the beneficiary's job duties fails to establish that an individual who possesses specialized knowledge is necessary for the proposed programmer analyst position in the United States. The following job duties are common duty descriptions within the computer software application field and thus appear not to rise to the level of specialized knowledge: design, develop, and provide customized implementation for clients' systems; obtain clients' sign off; system testing; and provide user training to clients. Additionally, the qualifications necessary for the beneficiary to successfully perform his job as a programmer analyst appear to be standard for the industry. Cf. *Occupational Outlook Handbook, supra*. The petitioner asserted that the maintenance and production support of the technological applications require a high degree of skill, expertise, knowledge and relevant experience, and that the organization has set up training facilities to accommodate these requirements. It is thereby reasonable to conclude that the beneficiary's educational background and claimed in-house training is equivalent to that of other technical programmer analyst or technical consultants, and not, per se, uncommon or unique or special. In addition, there has been no degree, certificate of completion, or course transcripts submitted to establish the training allegedly received by the beneficiary from the foreign entity. Accordingly, the petitioner has not established that the beneficiary would be employed in a specialized knowledge position or that the position requires an individual with specialized knowledge.

On appeal, counsel also referred to a 1988 INS memorandum as a guide for interpreting the statutory definition of specialized knowledge. See Memo, Norton, Assoc. Comm., Examinations (Oct. 27, 1988), reprinted in *65 Interpreter Releases 1194* (Nov. 7, 1988). In the memorandum, the Commissioner noted four characteristics of employees with "specialized knowledge," which counsel uses to emphasize that the beneficiary's training and experience in the software development and maintenance processes establishes that the beneficiary's knowledge differs from that generally found in the computer software application and development industry. The beneficiary's ability to execute software development and maintenance processes does not by itself establish that the beneficiary's knowledge is different from that generally found in the industry. In *Matter of Penner*, the Commissioner emphasized that the specialized knowledge worker classification was not intended for "all employees with any level of specialized knowledge." 18 I&N Dec. 49 (Comm. 1982). According to *Matter of Penner*, "[s]uch a conclusion would permit extremely large numbers of persons to qualify for the 'L-1' visa" rather than just the "key" personnel that Congress specifically intended. With regard to counsel's reliance on the 1988 Associate Commissioner's memorandum, the memorandum was intended as a guide for employees and will not supercede the plain language of the statute or the regulations. Therefore, by itself, counsel's assertion that the beneficiary's qualifications are analogous

to the examples outlined in the memorandum is insufficient to establish the beneficiary's qualification for classification as a specialized knowledge professional. As discussed, the petitioner has not submitted probative evidence to establish that the beneficiary's knowledge is uncommon, noteworthy, or distinguished by some unusual quality and not generally known in the alien's field of endeavor.

While the AAO acknowledges that the specialized knowledge classification is not solely for those "relatively rare employees with unusual knowledge," the legislative history for the term "specialized knowledge" provides ample support for a restrictive interpretation of the term. In *1756, Inc. v. Attorney General*, 745 F. Supp. 9 (D.D.C. 1990), the court upheld the denial of an L-1 petition for a chef, where the petitioner claimed that the chef possessed specialized knowledge. The court noted that the legislative history demonstrated a concern that the L-1 category would become too large: "The class of persons eligible for such nonimmigrant visas is narrowly drawn and will be carefully regulated and monitored by the Immigration and Naturalization Service." *Id.* at 16 (citing H.R. REP. No. 91-851, 1970 U.S.C.C.A.N. 2750, 2754, 1970 WL 5815). The court stated, "[I]n light of Congress' intent that the L-1 category should be limited, it was reasonable for the INS to conclude that specialized knowledge capacity should not extend to all employees with specialized knowledge. On this score, the legislative history provides some guidance: Congress referred to 'key personnel' and executives." *1756, Inc.*, 745 F. Supp. at 16.

Similarly, in *Matter of Penner*, the Commissioner emphasized that the specialized knowledge worker classification was not intended for "all employees with any level of specialized knowledge." 18 I&N Dec. 49 (Comm. 1982). According to *Matter of Penner*, "[s]uch a conclusion would permit extremely large numbers of persons to qualify for the 'L-1' visa" rather than the "key personnel" that Congress specifically intended. *Id.* at 53. In accordance with the statute and the legislative history, it would be inappropriate to expand the visa category to allow the entry of any personnel who already had knowledge of a petitioner's operations.¹

In visa petition proceedings, the burden of proving eligibility for the benefit sought remains entirely with the petitioner. Section 291 of the Act, 8 U.S.C. § 1361. The petitioner has not sustained that burden.

ORDER: The appeal is dismissed

¹ The precedent decision *Matter of Penner* pre-dates the 1990 amendment to the definition of "specialized knowledge." Other than deleting the former requirement that specialized knowledge had to be "proprietary," however, the 1990 amendment did not greatly alter the definition of the term. In particular, the 1990 Committee Report does not even support the claim that Congress "rejected" the INS interpretation of "specialized knowledge." The 1990 Committee Report does not criticize, and does not even refer to, any specific INS regulation or precedent decision interpreting the term. The Committee Report simply states that the Committee was recommending a statutory definition because of "[v]arying," [*i.e.*, not specifically incorrect], "interpretations by INS," H. Rep. No. 101-723(I), *supra*, at 69, 1990 U.S.C.C.A.N. at 6749. Beyond that, the Committee Report simply restates the tautology that became § 214(c)(2)(B) of the Act. *Id.* The AAO concludes, therefore, that *Matter of Penner* remains useful guidance concerning the intended scope of the "specialized knowledge" L-1B classification.
